Re: EPA Acknowledgment Addendum to Second Installation-Wide Five Year Review

Report, Joint Base Lewis-McChord, September 2017

Dear Ms. Ghebresllassie:

The U.S. Environmental Protection Agency (EPA) has conducted a review of the above document. The principle issues identified in the Five-Year Review was "Determination of protectiveness is deferred, pending additional sampling to address the potential for per- and polyfluoroalkyl substances (PFAS) in groundwater at OU 1, OU 2, and OU 3 at the time the Second Five-Year Review was signed.

Based on the results of the Addendum, the protectiveness determination can be changed to "Currently Protective" for all three OU's, and the Site overall.

If you would like to discuss this, or require clarification please contact me at (206) 553-1478 or cora.christopher@epa.gov.

Sincerely,

CHRISTOPHER CORA Digitally signed by CHRISTOPHER CORA Date: 2019.03.08 14:36:08

Christopher Cora

Remedial Project Manager

cc: Jason Cook, Washington Department of Ecology

EXSUM: Addendum to Second Installation-Wide Five Year Review Report (03/12/2019, MESERET GHEBRESLLASSIE, IRP PM, 253-477-3742)

BLUF: Addendum to Second Installation-Wide Five Year Review Report is to demonstrate human health protectiveness at both Operable Unit 1 (OU1) and Operable Unit 3 (OU3) and Perfluorinated Alkyl Substances(PFAS) in groundwater samples result below the EPA lifetime health advisory level (HAL) of 70 parts per trillion (ppt) for the sum of perfluorooctane sulfonate (PFOS) and perfluorooctanoic acid (PFOA). A Second Installation-Wide Five Year Review Report signed by Colonel, Nicole M. Lucas on November 14, 2017. Human health protectiveness was deferred by the EPA for OU 1 and OU3. The EPA factored recent discovery PFAS in JBLM drinking water into the Superfund Site five year review. The EPA believes that the pump and treat components of the OU1 - Logistics Center and OU3 – American Lake Garden Trace remedies have potential to intercept groundwater containing PFASs. Five Year Review evaluation of the remedies at JBLM Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) sites to continue to protect human health and the environment, as required by Federal Law.

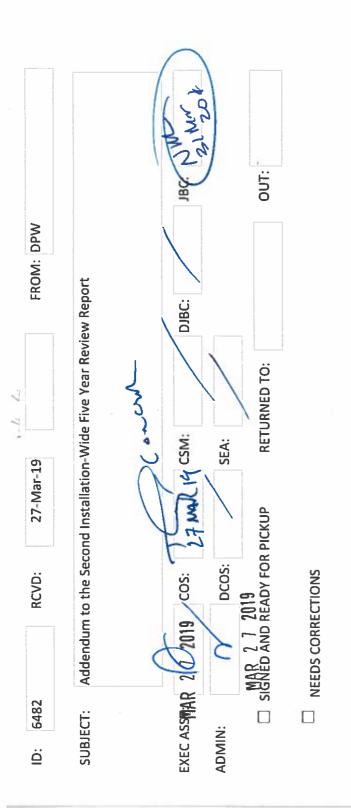

DISCUSSION:

This Addendum demonstrate that human health protectiveness at both OU1 and OU3 and the PFAS result below the EPA lifetime health advisory level (HAL) of 70 parts per trillion (ppt) for the sum of perfluorooctane sulfonate (PFOS) and perfluorooctanoic acid (PFOA).

POTENTIAL IMPACT TO JBLM: Violation of federal 40 Code of Federal Regulations § 300.430(f)(4)(ii) "If a remedial action is selected that results in hazardous substances, pollutants, or contaminants remaining at the sites above levels that allow for unlimited use and unrestricted exposure, the lead agency shall review such action no less often than every five years after the initiation of the selected remedial action."

RECOMMENDATION: The JBGC Sign the Addendum to The Second Installation-Wide Five Year Review Report.

MEMORANDUM FOR RECORD

SUBJECT: Addendum to Second Installation-Wide Five Year Review Report, Joint Base Lewis-McChord, September 2017

- 1. A Five-Year Review addendum is generally completed for remedies where the protectiveness determination is deferred until further information is obtained. When deferring protectiveness in the Five-Year Review report, Environmental Protection Agency (EPA) typically provides a timeframe for when the information will be obtained and a protectiveness statement can be made. This document provides progress since the Five-Year Review and protectiveness determinations for the remedies where the statement was deferred in the September 2017 Five-Year Review. The Five-Year Review report (Report) for Joint Base Lewis-McChord in Pierce County, Washington, was signed by Colonel Nicole M. Lucas on November 14, 2017. The protectiveness statements outlined in the Report were as follows:
- a. Operable Unit (OU) 1 Logistics Center Remedy: A protectiveness determination for the OU1 Logistics Center Remedy cannot be made at this time until further information is obtained. Further information will be obtained by taking the following action: an investigation and evaluation of the presence of per- and polyfluoroalkyl substances (PFASs) within the three pump and treat systems at the Logistics Center. It is expected that this action will take approximately three years to complete, at which time a protectiveness determination will be made.
- b. Operable Unit 3 American Lake Garden Trace (ALGT): A protectiveness determination for the OU3 ALGT remedy cannot be made at this time until further information is obtained. Further information will be obtained by taking the following action: an investigation and evaluation of the presence of PFASs within the Pump&Treat system at the ALGT. It is expected that this action will take approximately three years to complete, at which time a protectiveness determination will be made.
- 2. Progress Since the Five-Year Review Completion Date: This addendum addresses the Protectiveness Statements for OU 1 Logistics Center Remedy and OU 3 ALGT. The unknown condition of presence or absence of (PFAS) in groundwater at both OU 1 and OU 3 precluded making a protectiveness determination at the time the Second Five-Year Review was signed. An installation-wide preliminary assessment/site inspection (PA/SI) began in September 2017. The PA component has been completed. Results of the PA have not been published but were delivered to the EPA during Technical Project Planning meeting number two on 14 February 2018. Phase I of the SI has also been completed. This included groundwater sampling from 40 existing monitoring wells and influent and effluent water from three OU1 pump and treat systems and was based on the PA results and the Second Five-Year Review Recommendations. The Phase I sampling locations associated with the Second Five-Year Review were:

IMLM-PWE

SUBJECT: Addendum to Second Installation-Wide Five Year Review Report, Joint Base Lewis-McChord, September 2017

- a. OU1, Landfill 2 source area, groundwater sampling from two monitoring wells, specifically LC 153 and LC 230; and influent and effluent samples from the Landfill 2 treatment system, the I-5 treatment system, and the Sea Level Aquifer treatment system.
- b. OU2, Landfill 1 and 4 source area, groundwater sampling from five monitoring wells, specifically 84-CD-LF1-1, 84-CD-LF1-4, LF4-01, LF4-MW-10, and LF4-PNL1.
- c. OU3, ALGT Landfill 5 source area, groundwater sampling from four monitoring wells, specifically DA-7e, DA-21a, DO-2, and DO-5b. ALGT Pump and treat system has been shut down since June 2016 to evaluate monitored natural attenuation (MNA) as an alternative remedy for the site.
- 3. Phase I sampling results were delivered to EPA during Technical Project Planning meeting number three on 18 September 2018. These results were compared to the EPA lifetime health advisory level (HAL) of 70 parts per trillion (ppt) for the sum of perfluoroctane sulfonate (PFOS) and perfluoroctanoic acid (PFOA). The analytical results are summarized in the table below:

Notes:

U – Analyte None of these results exceed the 70 ppt HAL for PFOS/PFOA. was not detected above the practical quantitation limit shown

J – Estimated value

IMLM-PWE

SUBJECT: Addendum to Second Installation-Wide Five Year Review Report, Joint Base Lewis-McChord, September 2017

4. Issues and Recommendations. Based on these results, it is recommended that the protectiveness statements for Operable Unit 1 - Logistics Center Remedy and Operable Unit 1 - ALGT be revised from "deferred" to "protective."

5. Protectiveness Statements:

- a. OU1 Logistics Center Remedy: Based on new information and/or actions taken since the Five-Year Review completion date, the protectiveness statement for OU1 Logistics Center Remedy is being revised to currently protective of human health and the environment because the sum of PFOS/PFOA was found to be below the current HAL of 70 ppt in the Landfill 2 source area wells and Landfill 2, I-5, and Sea Level Aquifer pump and treat system influent and effluent samples.
- b. OU3 ALGT: Based on new information and/or actions taken since the Five-Year Review completion date, the protectiveness statement for OU3 ALGT is currently protective of human health and the environment because the sum of PFOS/PFOA was found to be below the current HAL of 70 ppt in samples collected from wells DA-21a, DA-7e, DO-2, and DO 5b, which are located within or downgradient of Landfill 5.
- 6. Overall Protectiveness Statement: The remedial action at OUs 1, 2, and 3 currently protect human health and the environment. For the remedy at the SRCPP (OU2) to be protective in the long-term, the prevention of residential land use needs to be incorporated into the JBLM LUC Plan and annual inspection checklists to ensure protectiveness.
- 7. The next five-year review will be completed on September 30, 2022.

8. The point of contact for this action is Meseret Ghebresllassie, 253-477-3742, email, meseret.c.ghebresllassie.civ@mail.mil.

Fact Sheet PFOA & PFOS Drinking Water Health Advisories. EPA 800-F-16-003, November 2016 (US EPA 2016s). Guidance provides a health advisory level of 70 ppt for PFOS and PFOA. If both PFOS and PFOA are found to be present, the concentrations of both PFAS combined will be compared to the value of 70 ppt.

*Based on US EPA Regional Screening Levels (RSLs) (US EPA, 2017).

*EFA Health Advisory Level

*Sum of detections for PFOS. PFOA, PFBS. PFHpA, PFHsA, and PFNA.

Values in **bold** fort indicate the compound was reported as detected.

Indicates the concentration is at or exceeds the project action limit.

Sum of 6 UCMR PFAS compounds greater than 70 ppt

UCMR Compound

DUP - Field duplicate

J - Estimated value

ND - Not detected

NE - Not established

ngl - ranogram per liter

NME/OSAA - N-methyl perfluorooctunesulfonamidoacetic acid

PFAS - Per- and popylfouralityl substances

PFBS - Perfluorobutunesulfonate

PFBA - Perfluorobectancic acid

PFDA - Perfluorobectancic acid

PFDA - Perfluorobectancic acid

PFHA - Perfluorobectancic acid

PFHxA - Perfluorohexanoic acid
PFHxS - Perfluorohexanoic acid
PFHxB - Perfluorohexanoic acid
PFOA - Perfluoronotanoic acid
PFOA - Perfluorocotanoic acid
PFOS - Perfluoro-octanosulfonate
PFTA - Perfluorotetradecanoic acid
PFTTA - Perfluorotridecanoic acid
PFTTA - Perfluorotridecanoic acid
PFTAD - Perfluorotridecanoic acid
PFUAD - Perfluorotridecanoic acid
U - Analyte was not detected above the practical quantitation limit shown.
UCMR - Unregulated Contaminant Monitoring Rule
UI - Analyte was not detected above the practical quantitation limit shown. The practical quantitation limit is an estimated value.
